

1. Go to Tools > Function Helper Dialog **OR**, alternatively hit Ctrl+Shift+F1 to get the dialog box.
2. Choose **P** from the drop down list
3. Set properties as shown in the screenshot below

**Steps to execute the script using command line:** The recommended format is (by default as you see on command line when jmeter is kickstarted)

```
jmeter -n -t [jmx file] -l [results file] -e -o [Path to web report folder]
```

Now based on that and the properties that are created recently, here are simplified sub-steps

1. **Go to bin:** `cd C:\..\apache-jmeter-5.6.2\bin`
2. **Write:** `jmeter -JnoOfThreads=2 -JrampUp=5 -JloopCount=2`
3. **The write:** `-n -t C:\..\apache-jmeter-5.6.2\tests\day2\S_P_C_O_TP_Demo.jmx`
4. `-l C:\..\apache-jmeter-5.6.2\testresults\S_P_C_O_TP_Demo.jtl`
5. `-e -o C:\..\apache-jmeter-5.6.2\testreports`
